

NEXT GENERATION SERVICE

Filtration Group makes your dedusting system ready for “smart manufacturing”

CUSTOMER BENEFIT

- Machine monitoring around the clock and from anywhere in the world
- Reduction of complex, manual inspection processes
- Early detection of faults before expensive malfunctions, machine and production downtimes can occur

SmartRun 4.0

What exactly is the SmartRun 4.0 system?

The SmartRun 4.0 is an upgrade for existing or new dust collection systems. The SmartRun 4.0 system permanently records the operating parameters of your dedusting system and makes them available in real time. The measured values are continuously recorded and stored directly in a cloud using a mobile phone connection. (Alternative connection via LAN possible). The data can be accessed via a web browser via any Internet-capable PC. A mobile app for smartphones is also available. This allows easy access to all data.

All operating data available - anywhere, anytime with FG SmartRun 4.0

When and where does SmartRun 4.0 help?

- Useful for all maintenance staff and operators of dedusting plants
- Large production plants with many different dedusting systems
- Plants with frequent process disturbances and problems in the filtration process
- In case of possible moisture ingress or high temperature fluctuations
- Plants in critical processes with frequent, unscheduled downtimes

Which values can be collected?

- Differential pressure curve
- Cleaning behaviour
- Temperature
- Moisture
- Fan data
- And much more

Interested?

- Would you like to minimize your maintenance costs?
- Would you like to be able to identify faults at an early stage and react quickly?
- Do you want or need to improve your documentation quality?
- Would you like to save energy and costs?

Let our service team consult you. We will prepare a non-binding offer for you or, on request, put together an individual service contract for you.
